INQUIRIES

- for further information about statistics in this publication and the availability of unpublished statistics, contact Information Services on Sydney (02) 268 4611.
- for information about other ABS statistics and services please see the Explanatory Notes, page 79.

Symbols and Other Usages

Standard notations are used throughout this publication with meanings as follows:

C	City	SD	Statistical Division
LGA	Local Government Area	SLA	Statistical Local Area
M	Municipality	SR	Statistical Region
MSR	Major Statistical Region	SRS	Statistical Region Sector
n.a.	Not available	SSD	Statistical Subdivision
n.p.	Not available for separate publication (but included in totals where applicable)	..	Not applicable
p	Preliminary — figure subject to revision	—	Nil or rounded to zero
S	Shire	*	Subject to sampling variability too high for most practical purposes
S Dist.	Statistical District		

Where figures have been rounded, discrepancies may occur between sums of the component items and the totals shown.

Introduction

Regional Statistics, New South Wales contains recent principal statistics for statistical areas of the State.

The publication presents data for statistical areas based on the Australian Standard Geographical Classification. Table 1 contains labour force status of the population classified into statistical regions of the State. Tables 2 to 14 contain demographic and economic statistics: Table 2 contains data for the State and its component statistical divisions; and Tables 3 to 14 contain data for each statistical division with its component statistical local areas arranged alphabetically.

Australian Bureau of Statistics (ABS) publications draw extensively on information provided freely by individuals, businesses, governments and organisations. Their continued cooperation is very much appreciated; without it the wide range of statistics published by the ABS would not be available for general use by the community. Information received by the ABS is treated in strict confidence as required by the Census and Statistics Act.

The data contained in this publication represent only a sample of the full range of statistics available from the ABS. For further information about ABS statistics and services refer to page 79 of this publication.

Statistical Divisions of NSW

Structure

For the purpose of presenting the principal series of official statistics for the State, New South Wales is divided into a number of geographical areas. These areas consist, for the most part, of aggregations of local government areas.

The primary division of the State is into twelve *Statistical Divisions*. These are intended to represent 'regions' of the State which are characterised by discernible social and/or economic links between the inhabitants and economic units within them, under the unifying influence of one or more major cities or towns. The boundaries of the divisions have accordingly been delineated on the basic criterion that the degree of economic and/or social contact and interaction within each division should be maximised. It should be emphasised that the boundaries of the divisions cannot be regarded as sharp lines of demarcation — they may, of necessity, be positioned within peripheral zones in which the influence of two or more 'focal' cities or town overlap in varying degrees.

Sydney Statistical Division

A list of statistical area codes and their names are shown in Appendix A.

Geography

The Division consists broadly of the Cumberland Plain. To the north of the Plain, the Division includes the moderately elevated Hornsby Plateau and, beyond the Hawkesbury River, the coastal lowland plains containing Gosford and Wyong. To the north-west, north, and south-west of the Cumberland Plain, the Division comprises the Blue Mountains and other associated ranges. The southern part of the Division is mainly composed of the moderately elevated Woronora Plateau. The region has a warm, humid climate, except for the higher parts of the mountain ranges where temperatures are cooler, with heaviest rainfall normally occurring in summer and autumn. Rainfall is markedly irregular and declines from east to west. Sydney is the focal point of the State's rail, road, and air services. It also provides port facilities for overseas, interstate, and intrastate shipping. It is the seat of public administration for the State, and the leading commercial, industrial, financial, educational, and cultural centre.

Sydney

1991 CENSUS

Small Area Data

Two information packages from the 1991 Census of Population and Housing are now available. The products will help you gain a precise picture of your local area.

1. Census Small Area Package

This package contains a Basic Community Profile for each collection district (about 200 dwellings) in a Local Government Area (LGA) as well as the total LGA. The Basic Profile gives you 58 tables of data from the 1991 Census. Information is provided on a wide range of variables including:

- Age ■ Ethnicity ■ Dwellings ■ Education ■ Labour Force Status ■ Income
- Method of Travel to Work ■ Industry and Occupation

FORMAT

Available on floppy disk, all data can be accessed using specially designed software. The software allows you to combine data for areas; rank; sort; and export data into other software packages.

The Small Area package is available from \$250 per LGA.

2. Ethnic Communities Package

This package is made up of four products; you can select one or any combination of products.

- Counts of Ethnic Communities for a Local Government Area.
- For each Local Government Area (LGA) you will receive counts of the numbers of persons from all birthplaces, language and religious groups in your chosen LGA. The data will be broken down into selected age groups, by males, females and total persons.

The other products you can choose from are:

- Birthplace Profile — select a birthplace
- Language Profile — select a language
- Religion Profile — select a religion

Each profile will give you a wide range of data on the group you select.

Call for a complete list of Local Government Areas birthplaces, language and religious groups.

Hunter Statistical Division

A list of statistical area codes and their names are shown in Appendix A.

Geography

The Hunter River and its tributaries in this Division form one of the largest river valleys on the New South Wales coast. To the north and south the area is enclosed by rugged highlands, while to the west less rugged highlands give easy access to the New England areas. The climate is generally of the warm humid type with heaviest rainfall normally occurring in summer and autumn. Rainfall decreases markedly in amount and reliability from the coast inland. Railways traverse the region linking the most important towns and a highway closely follows the main northern rail route.

Illawarra Statistical Division

A list of statistical area codes and their names are shown in Appendix A.

Geography

The coastal portion of the Division consists of a discontinuous coastal plain where a series of river valleys (Minnamurra and Shoalhaven) alternate with spurs of more elevated land extending eastwards from the tablelands. To the west of this coastal plain is a long escarpment which gives way to exceedingly rugged terrain in the Shoalhaven area, and the land in the north-western part of the Division consists of undulating tablelands. The climate is generally of the warm, humid type with heaviest rain fall occurring in summer and autumn.

Rail communication in the Division comprises the Illawarra line extending through the coastal belt and terminating at Nowra; the main southern line passing through Bowral; and a connecting link (Unanderra-Moss Vale), which is used mainly for goods traffic. Highway communication follows a similar pattern with a coastal road, a tablelands road, and several roads linking the Bowral area with the Illawarra Plains districts.

Illawarra

Agricultural Activity!

You can find data on:

Crops, fruit trees, fertiliser use, livestock, wool production, irrigation and many other topics using Ag Stats.

Ag Stats is available on floppy disk, CD-ROM, Microfiche and magnetic tape.

The electronic format allows easy selection of a region and its agriculture production. You can identify principal commodities for a given area and identify the change in production patterns over time.

Richmond-Tweed Statistical Division

A list of statistical area codes and their names are shown in Appendix A.

Geography

The Division consists of two major coastal river basins (of the Richmond and Tweed Rivers) and a river valley (of the upper Clarence River). It is enclosed on the north by the rugged McPherson Range, on the west by the more easterly extensions of the New England Plateau, and on the south by the less rugged Richmond Range. The Richmond Range extends northerly into the Division and separates the river valley from the coastal basins. The climate of the region is humid sub-tropical. The rainfall varies in intensity and occasional severe flooding occurs. The area has a rail and road system of communications cutting the river system at right angles, and a highway linking the coast to the hinterland.

Richmond-Tweed

Mid-North Coast Statistical Division

A list of statistical area codes and their names are shown in Appendix A.

Geography

This Division covers the coastal strip extending from Wallis Lake in the south to the Richmond Range in the north, and comprises a series of valleys running generally east-west (valleys of the Clarence, Macleay, Hastings, and Manning Rivers). The valleys have generally been intensively developed for agriculture, while the hills separating the valleys have seen little development. The region has a warm and humid to sub humid climate. Rainfall is high; occasional severe flooding is a feature of the river valleys. The main road and rail system cuts across the river system and provides a link between areas to the north and south of the Division (e.g. Brisbane to Sydney). Other major roads run from the coast to the hinterland—Grafton to Glen Innes, Kempsey to Armidale, Port Macquarie to Tamworth, etc.

Northern Statistical Division

A list of statistical area codes and their names are shown in Appendix A.

Geography

There are three identifiable regions in the Division—the northern tablelands (mainly undulating hill lands generally over 1,000 metres above sea level), the northern slopes to the west of the tablelands, and the flat north central plains, watered by the Macintyre, Gwydir, and Namoi Rivers. The tablelands is an area with mild summers and cold winters and a moderate rainfall, with the heaviest rainfall occurring in summer. West of the tablelands the summers are warm to hot, with a similar rainfall pattern. Tamworth is the principal city of the Division, and the centre of communications system by rail, road, and air. The main northern rail line from Newcastle passes through Qui. ndi, Tamworth, Armidale, Glen Innes, and Tenterfield. There is an extensive highway system linking all of the major towns and cities in the Division.

ESSENTIAL READING FROM THE ABS.

Monthly Summary of Statistics & Economic Indicators, NSW

Subscribe to these two publications and you will receive selected statistics each month.

Statistics in *Monthly Summary* include: population, employment, prices, production, building, and trade.

Economic Indicators gives an overview of key trends in NSW.

Monthly Summary - \$14.30

Catalogue number: 1305.1

Economic Indicators - \$ 5.60

Catalogue number: 1307.1

State of Health in NSW

Designed for health workers and students, this publication provides the latest information on the health of the population in each NSW health area/region.

Estimates from the 1989-90 National Health Survey and related data from NSW Health along with informed commentary make this a unique publication.

Jointly produced by NSW Health and the Australian Bureau of Statistics.

\$30.00

Catalogue number: 4330.1

NSW Year Book 1993

The *NSW Year Book* puts the most important and recent NSW statistics from each collection in one volume.

It provides a quick reference to everything from average rainfall to the State's major export groups.

A user-friendly reference essential for every home and business library.

\$31.00

Catalogue number: 1300.1

To order call (02) 268 4620 or write to:
ABS Bookshop, GPO Box 796, Sydney, 2001.

North Western Statistical Division

A list of statistical area codes and their names are shown in Appendix A.

Geography

There is a diversity of topography in the Division with elevated lands extending from the central tablelands in the east; gently undulating slopes in the river basins of the Macquarie, Castlereagh, and Bogan Rivers in the central areas; and flat plains in the far west. Climatically this region is also diverse but is mostly semi-arid, particularly in the westerly and northerly parts. It has a hot summer and a fairly wide range between summer and winter temperatures. The eastern parts receive about 650 millimetres of rainfall per annum but only about half this amount is received in the western portion. The area is well served by railways with several lines, i.e. from Cobar, Bourke, Brewarrina and Coonamble, focussing on Dubbo—the main economic centre of the region. Other lines connect Dubbo to Parkes, Molong, and Orange. At Dubbo the Mitchell Highway, which runs parallel to the railway line to Bourke, intersects the Newell Highway which traverses New South Wales from the Queensland border to the Victorian border.

North Western

Central West Statistical Division

A list of statistical area codes and their names are shown in Appendix A.

Geography

The Division lies to the west of the Blue Mountains and extends to beyond Condobolin. The eastern parts are made up of a number of discontinuous highland areas which contain the source of the Macquarie River, while the western parts watered by the Lachlan River are undulating at first, giving way to flat plains. The Bathurst-Orange Growth Centre is the focal point of the region. In the cool highland region, rainfall is fairly evenly distributed throughout the year, while in the plains areas the summers are warm to hot, and rainfall is moderate on the slopes, tapering off to light in the west. The Sydney-Broken Hill railway line traverses the region connecting the cities of Lithgow, Bathurst, and Orange. The Mid-western, Newell, and Mitchell Highways cross the Division, linking these cities and the urban areas of Cowra, West Wyalong, Forbes, and Parkes.

Central West

South Eastern Statistical Division

A list of statistical area codes and their names are shown in Appendix A.

Geography

The South Eastern Division comprises the lower south coast, the Snowy Mountains, and the southern tablelands (excluding the ACT). The coastal strip consists of a discontinuous coastal plain where a series of river valleys (Clyde, Moruya, Tuross, and Bega Rivers) alternate with spurs of more elevated land extending eastwards from the tablelands. The mountainous Snowy region lies in the south-west corner contiguous to the Victorian border and reaches elevations of over 2,200 metres, the highest in Australia. Snowfields in this area are a major tourist attraction. The tablelands are gently undulating with elevations of about 750 metres above sea level. The narrow south coast area has a humid cool-temperate climate and an average yearly rainfall of about 900 millimetres. Much cooler temperatures are experienced on the more elevated tablelands, and very cold temperatures occur on the Alps. Average annual rainfall on the tablelands ranges between 500 and 700 millimetres, but in the mountains exceeds 1,400 millimetres. The Division is served by the main southern railway line and branch lines from Goulburn, and by an extensive highway system linking the major population centres in the Division.

Murrumbidgee Statistical Division

A list of statistical area codes and their names are shown in Appendix A.

Geography

The Murrumbidgee River traverses the Division from east to west, with the area west of Narrandera containing the Murrumbidgee and other irrigation areas. Wagga Wagga, the major centre of regional significance, is located in the eastern portion of the Division. The region is characterised by cold temperatures in winter in the hilly eastern region, and warm to hot summers and cool winters in the western region. Average annual rainfall (in millimetres) varies from 1,360 at Batlow and 880 at Tumut to 550 at Wagga Wagga, 620 at Cootamundra, and 330 to 450 in the irrigation areas and more westerly parts. Railway communication is widespread in the Division. The main southern line passes through the eastern section linking Cootamundra, Junee, and Wagga Wagga to Albury, and from it many branch lines serve other areas. The branch lines are of particular importance to the wheat industry. Three highways run north to south across the Division meeting three other highways crossing the Division in an east-westerly direction.

Murrumbidgee

Murray Statistical Division

A list of statistical area codes and their names are shown in Appendix A.

Geography

The entire length of the Murray River on the New South Wales border marks the southern boundary of this Division. The terrain in the western and central parts of the Division is flat, becoming undulating and finally very rugged on the eastern border. The temperature is generally warm to hot in summer and mild in winter. The average annual rainfall (in millimetres) declines from 980 at Tumbarumba in the eastern sector to 700 at Albury and Holbrook, 392 at Deniliquin, 330 at Balranald, and 263 at Wentworth. The main southern railway line and the Hume Highway from Sydney to Melbourne pass through Albury, the main centre of population in the Division. The other urban areas in the Division are adequately served by highways passing through the Division and/or extension of the broad-gauge Victorian railway system.

Far West Statistical Division

A list of statistical area codes and their names are shown in Appendix A.

Geography

The Division comprises the City of Broken Hill, the Shire of Central Darling, and all of the unincorporated area of New South Wales. It is bounded by the Queensland and South Australian borders in the north and the west, and by the boundaries of the Shires of Wentworth and Balranald in the south, and the Shires of Bourke, Cobar, and Carrathool in the east. The Darling River passes through the region from the north-east to the south. To the west of the river, the extremely flat plains give way to gentle slopes reaching the low geologically ancient Barrier Range on which stands Broken Hill, the only sizeable city in the far west. The climate is of the semi-arid desert type. Temperatures range from hot in summer to cool to mild in winter. The average annual rainfall is in the range of 200 to 250 millimetres, with maximum rainfall occurring in the summer. The western railway line, which is part of the Sydney-Perth standard gauge line, passes through Broken Hill. The two highways traversing the Division focus on Broken Hill, with the Silver City Highway from Wentworth to Broken Hill and the Barrier Highway from Nyngan through Broken Hill to Gawler (near Adelaide), both being sealed.

EXPLANATORY NOTES

Statistical Areas of New South Wales

This publication contains data presented according to the Australian Standard Geographical Classification (ASGC). However due to the unavailability of certain data items on this basis, the information shown has been combined for a small number of areas. Specifically where local government areas have been split. Under this classification, statistical areas are defined as follows:

Statistical Local Areas (SLAs)

These geographical areas are, in almost all cases, identical with, or have been formed from a division of, whole legal local government areas (LGAs) as defined under the (State) Local Government Act 1919 and comprising cities (C), municipalities (M) and shires (S). In other cases, they represent areas which are unincorporated under the Act. In aggregate, SLAs cover the whole of the State without gaps or overlaps. In some cases legal LGAs overlap statistical subdivision boundaries and therefore comprise two SLAs (Part A and Part B) or three SLAs in the case of Cabonne (S) (Part A, Part B and Part C).

Statistical Subdivisions (SSDs)

These consist of one or more SLAs and form the intermediate size spatial unit for the presentation of regional data.

Statistical Divisions (SDs)

These consist of one or more statistical subdivisions (SSDs). Where SSDs are not shown, statistical local areas are ordered alphabetically within statistical divisions. The divisions are designed to be relatively homogeneous regions characterised by identifiable social and economic units within the region, under the unifying influence of one or more major towns or cities.

Urban Centres

These are defined for each census of Population and Housing and consist of one or more whole adjoining census collection districts with urban characteristics and represent population clusters of 1,000 or more people. Because of their nature they can straddle SLAs and SSDs.

Further information concerning statistical areas is contained in the publication *Australian Standard Geographical Classification* (1216.0).

Amalgamations and boundary changes to legal local government areas

Where amalgamations of legal local government areas have occurred, figures shown in this bulletin relate to the new areas formed by the amalgamations.

Where boundary changes between legal local government areas have occurred, the figures shown for each legal local government area (or statistical area) generally relate to its boundaries as at the end of the year shown (usually 30 June). However,

- estimated resident population for 1986 and later years have been adjusted for boundary changes that have occurred between 30 June 1986 and 30 June 1991—all figures shown relate to the boundaries as defined at 30 June 1991;
- building approvals are allocated to the legal local government area in which the building was situated at the time of approval; and
- agricultural statistics relate to boundaries at 31 March 1992.

Definitions of Terms Used**Estimated Resident Population**

Commencing with the 1981 Population Census, the Australian Bureau of Statistics introduced a new conceptual basis of population estimates—the *Estimated Resident Population*. Under this basis, population estimates are compiled according to the *place of usual residence* of the population. The previous system of estimating the number of persons at their *actual place of location* is no longer used as the basis of these estimates.

The estimates for 30 June 1986, representing the number of usual residents in the area, are based on census data (i.e. the census count at the actual location plus usual residents

temporarily absent in other areas of Australia less visitors to the area from other areas in Australia or from overseas) and, in addition, include:

- an adjustment for census under-enumeration, and
- an estimate of the number of usual residents who were temporarily overseas (i.e. for less than 12 months) at the time of census.

The Australian population census ranks high in world comparisons of accuracy, but some people are missed. In order to obtain a measure of the extent of this under-enumeration, a post-enumeration survey is undertaken as soon as possible after the census. This survey provides adjustment factors by sex and age, for both Sydney and the rest of State population, to allow for census under-enumeration.

The Australian census does not attempt to enumerate residents temporarily overseas (i.e. for less than 12 months). Instead this component of the estimated resident population is estimated from the passenger cards which are filled in by all persons arriving in or departing from Australia. Information on these cards enables an estimate to be made of residents temporarily overseas at the time of the census according to the legal local government area of their usual residence.

The estimates shown for 30 June 1987, 30 June 1988, 30 June 1989, 30 June 1990 and 30 June 1991 are based on the estimated resident population at census date 1986 and on available measures of population change since the census.

Average annual rate of change in population during the intercensal period 1981 to 1986 has been calculated for estimated resident population on the basis of boundaries as defined at 30 June 1986; in some instances this has involved a measure of estimation where boundary changes have occurred.

Vital Statistics

Births and Deaths relate to all registrations of such events which occurred within Australia, irrespective of State of registration, where the usual residence was within New South Wales. Births are allocated to a statistical local area of the State according to the usual residence of the mother, and deaths are allocated according to the usual residence of the deceased (infant deaths are generally assigned to the usual residence of the mother).

Building Statistics

Statistics of building work approved are compiled from:

- permits issued by local government authorities in areas subject to building control by those authorities;
- contracts let or day labour work authorised by Commonwealth, State, and semi-government and local government authorities;
- all approved new residential building jobs valued at \$10,000 or more;
- approved alterations and additions to residential buildings valued at \$10,000 or more; and
- all approved non-residential building jobs valued at \$50,000 or more.

Residential building—A house is defined as a detached building predominantly used for long-term residential purposes and consisting of only one dwelling unit. An *other residential building* is defined as a building which is predominantly used for long-term residential purposes and which contains (or has attached to it) more than one dwelling unit.

Non-residential building is classified according to its intended major function. Examples of the types of individual building jobs included under each main functional heading are shown in the following list:

Hotels, etc.

Includes motels, hostels, boarding house, guest houses, holiday apartment buildings.

- Shops**
Includes retail shops, restaurants, cafes, taverns, dry cleaners, laundromats, hair salons and shopping arcades.
- Factories**
Includes paper mills, oil refinery buildings, brickworks, foundries, power-houses, manufacturing laboratories, workshops as part of a manufacturing process.
- Offices**
Includes banks, post offices and council chambers, head and regional offices.
- Other business premises**
Includes warehouses, storage depots, service stations, transport depots and terminals, electricity sub-station buildings, telephone exchanges, mail sorting centres, television stations and studios.
- Educational**
Includes schools, colleges, kindergartens, libraries, museums, art galleries, research and teaching laboratories, theological colleges.
- Religious**
Includes churches, chapels and temples.
- Health**
Includes hospitals, nursing homes, surgeries, clinics and medical centres.
- Entertainment and recreational**
Includes clubs, theatres, cinemas, public halls, gymnasiums, grandstands, squash courts and recreation centres.
- Miscellaneous**
Includes homes for the aged (where medical care is not provided as a normal service), law courts, orphanages, gaols, barracks, mine buildings, glass houses, livestock sheds, shearing sheds, fruit and skin drying sheds, public toilets, and ambulance, fire and police stations.
- Other classes**
In addition to Miscellaneous includes Hotels etc., Other business premises, Religious, Health, and Entertainment and recreational.

Agricultural Activity

Agricultural statistics shown relate either to the 1991-92 season or are at 31 March 1992.

An *establishment with agricultural activity* is a single physical location which is used for the production of crops (including fruit and vegetables) and/or for the raising of livestock and the production of livestock products. Where two or more locations are within the same statistical local area and are worked as one, they are regarded (for statistical purposes) as forming a single establishment. From 1991-92, establishments with an estimated value of agricultural operations less than \$22,500 are excluded.

The figures shown for gross value of agricultural commodities produced are estimates derived in the following manner:

For each agricultural commodity produced in New South Wales, a value of production is estimated, for the State as a whole, by valuing the total recorded production at the average annual wholesale prices realised in the market place (in general, the market place is the metropolitan market). This value is then apportioned to the statistical local areas in the State according to the quantity of that commodity produced in the area (obtained in most cases from the Agricultural Census and special supplementary collections). The gross value of agricultural commodities produced for an area is therefore the total of all commodity values which have been apportioned to that area.

Except for certain crops grown in irrigation areas (grapes and oranges), this method of estimation does not take account of differences in unit prices between regions. The estimation method also assumes that the whole of each commodity is sold in the market place. Beekeeping activities are included in the estimates but the values are apportioned to a particular local government area purely on the basis of the postal address of the operator. Other agricultural activities may

be undervalued because some specialist activities are not identified in the Agricultural Census (e.g. studs). For these reasons, the figures shown should be treated as providing only an indication rather than a precise measure of the value of agricultural commodities produced in an area.

Cattle for meat production comprise beef-breed bulls and bull calves used (or intended) for service; other cattle (cows, heifers, calves, steers, etc.) mainly for meat production; and house cows and heifers (one year and over).

Cattle for milk production comprise dairy-breed bulls and bull calves used (or intended) for service and cows, heifers, and heifer calves used (or intended) for the production of milk or cream for sale.

Manufacturing

A full-scale census is conducted triennially, with small-scale censuses, where businesses are requested to provide data on employment, wages and salaries and turnover, being conducted in each of the intervening years. For full-scale censuses additional data including expanded revenue and expense items and details of assets, liabilities, materials used and articles produced are collected. A small-scale census was conducted in 1988-89. A full-scale census has been conducted for 1989-90 but small area statistics are not yet available. Manufacturing as specified in Division C of the *Australian Standard Industrial Classification* (ASIC) 1983 Edition (1201.0) broadly relates to the physical or chemical transformation of materials or components into new products, whether the work is performed by power-driven machines or by hand.

The period covered by the Census is usually the twelve months ended 30 June. Where businesses find it impossible to supply information on this basis, a substitute accounting period is used.

Establishments at end of June

The number of establishments in operation at end of June.

Employment

Consists of working proprietors and employees on the payroll at the end of the last pay period in June.

Wages and salaries of employees

Drawings of working proprietors are excluded.

Turnover

Refers to sales (excluding excise and sales tax) of goods whether produced by the establishment or not; plus transfers out of goods to other establishments of the same enterprise; plus bounties and subsidies on production; plus commission, repair, service, rent, leasing and hiring revenue; plus capital work done for own use, for rental or lease. Receipts from interest, royalties, dividends and the sale of fixed tangible assets are excluded.

Hotels, Motels, etc., With Facilities

Tourist accommodation establishments are defined as establishments which provide predominantly short-term accommodation (i.e. for periods of less than two months) available to the general public. The tourist accommodation establishments for which statistics are included in this publication are licensed hotels, motels, and guest houses which provide bath or shower and toilet in most guest rooms and have breakfast available for guests.

Guest rooms refers to the maximum number of rooms, units, suites, etc. available for accommodating paying-guests at the establishments during the June Quarter 1992.

Bed spaces refers to the maximum number of beds available (excluding cots) to accommodate paying guests during the June Quarter 1992. Three-quarter beds are classified as single beds, and double beds are counted as two bed spaces.

Room occupancy rate refers to the proportion of guest rooms occupied to the number of paying guest rooms available during the quarter ended 30 June 1992, expressed as a percentage.

Bed occupancy rate refers to the proportion of bed spaces occupied to the number of bed spaces available during the quarter ended 30 June 1992, expressed as a percentage.

Takings from accommodation refers to revenue received from the provision of both short-term and long-term accommodation at the accommodation establishment. Takings from meals are excluded.

Municipalities and Shires — Ordinary Services

The figures present selected financial aggregates relating to the provision of *ordinary services* (that is, activities other than trading activities) by Municipal and Shire councils. They have been compiled from councils' annual statements of account for the year ended 31 December 1991. For years prior to and including 1988, figures were compiled by means of an integrated Australia-wide system known as Standardised Local Government Finance Statistics (SLGFS). Data for 1991 have been compiled on a different basis incorporating only major aggregates. Detailed data for each council are published in an annual bulletin, *Local Government Finance, New South Wales* (5502.1).

Labour Force Status of the Civilian Population

Estimates of the civilian labour force derived from the labour force survey component of the monthly population survey, which is conducted on a sample basis throughout Australia.

The monthly population survey

This survey consists of the labour force survey and, in most months, one or more supplementary topics. The survey is based on a multi-stage area sample of private dwellings (houses, flats, etc.) and non-private dwellings (hotels, motels, etc.) and covers slightly less than one-half of one per cent of the population of New South Wales. The information is obtained from the occupants of selected dwellings by carefully chosen and specially trained interviewers. The interviews are generally conducted during the two weeks beginning on the Monday between the 6th and 12th of each month. The information obtained relates to the week before the interview (i.e. the reference week).

Scope

The labour force survey includes all persons aged 15 and over except:

- members of the permanent defence forces;
- certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations;
- overseas residents in Australia; and
- members of non-Australian defence forces (and their dependants) stationed in Australia.

Reference week

The reference week is the seven day period preceding the week in which interviews take place.

The Labour Force

The labour force comprises all persons in scope of the survey who, during the reference week, were employed or unemployed as defined below.

Employed persons

These comprise all civilians aged 15 and over who, during the reference week:

- worked for one hour or more for pay, profit, commission or payment in kind (including employees, employers and self-employed persons) in a job or business, or on a farm; or
- worked for one hour or more without pay in a family business or on a farm (i.e. unpaid family helpers); or
- were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the reference week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the reference week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or

- were employers, self-employed persons or unpaid family helpers who had a job, business or farm, but were not at work.

These employed persons can be classified into:

full-time workers (i.e. those who usually worked 35 hours or more a week (in all jobs) and others who, although usually part-time workers, worked 35 hours or more during the reference week); and

part-time workers (i.e. those who usually worked less than 35 hours a week and who did so during the reference week).

Unemployed persons are all those aged 15 and over who were not employed during the reference week, and

had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week, and:

- were available for work in the reference week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the reference week); or
- were waiting to start a new job within four weeks from the end of the reference week and would have started in the reference week if the job had been available then; or

were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the reference week (including the whole of the reference week) for reasons other than bad weather or plant breakdown.

Actively looking for work includes writing, telephoning or applying in person to an employer for work; answering a newspaper advertisement for a job; checking factory or Commonwealth Employment Service notice-boards; being registered with the Commonwealth Employment Service; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives.

Persons not in the labour force are those who, during the reference week, were not in the categories 'employed' or 'unemployed', as defined above.

For more information...

The ABS publishes a wide range of information on Australia's economic and social conditions. Details of what is available in various publications and other products can be found in the *ABS Catalogue of Publications and Products* available at all ABS Offices (see below for contact details).

Information Consultancy Service

Information tailored to special needs of clients can be obtained from Information Consultancy Service available at ABS Offices (see Information Inquiries below for contact details).

Electronic Data Services

A wide range of ABS data are available on electronic media. Selections of most frequently requested statistics are available, updated daily, on DISCOVERY (Key *656#). The ABS PC TELESTATS service delivers major economic indicator main features ready to download into personal computers on the day of release. The PC AUSSTATS service enables on-line access to a data base of thousands of up-to-date time series. Selected datasets are also available on diskette or CD-ROM. For more details on electronic data services available, contact Information Services in any of the ABS Offices (see Information Inquiries below for contact details).

Bookshops and Subscriptions

There are over 500 titles of various publications available from ABS bookshops in all ABS Offices (see below Bookshop Sales for contact details). The ABS also provides a subscription service through which nominated publications are provided by mail on a regular basis at no additional cost (telephone Publications Subscription Service toll free on 008 02 0608 Australia wide).

Cat. No. Publication

- 1101.1 Index of Localities, New South Wales** (three yearly)
This index is an alphabetical list of all localities in New South Wales showing the local government area in which each locality is situated.
- 3209.1 Estimated Resident Population by Age and Sex in Statistical Local Areas, New South Wales** (annual)
Contains the estimated resident population by age (in 5-year age groupings) for each statistical local area, statistical subdivision and statistical division at 30 June.
- 3210.1 Estimated Resident Population of Statistical Local Areas, New South Wales, Preliminary** (annual)
Area and preliminary estimated resident population of municipalities and shires grouped in statistical areas, at 30 June.
- 3311.1 Demography, South Wales** (annual)
Detailed statistics on births, marriages, divorces and some death statistics. Also includes overseas arrivals and departures and other components of population change, and population projections.
- 3312.1 Deaths, New South Wales** (annual)
Contains statistics on deaths registered showing sex, age, other characteristics and cause of death classified according to the World Health Organisation's International Classification of Diseases. Also contains crude and age-specific death rates, life expectancy and statistics of infant deaths and perinatal deaths.
- 5502.1 Local Government Finance, New South Wales** (annual)
Summary tables of financial data for Sydney Statistical Division, Newcastle and Wollongong Statistical Subdivisions and rest of State classified according to type of services provided. Includes details on income, expenditure, capital transactions and debt for ordinary services and trading undertakings of each local government authority.
- 6201.1 The Labour Force, New South Wales** (quarterly)
Labour force status of the civilian population aged 15 and over for New South Wales and each region of New South Wales. Employed persons are classified by sex, age, family status, birthplace, status of worker, industry, occupation and full-time or part-time status; unemployed persons by sex, age, industry, occupation and duration of unemployment.
- 7503.1 Value of Agricultural Commodities Produced, New South Wales**
This publication contains statistics on the gross and local values of agricultural commodities produced in New South Wales. In addition, statistics are also shown for the gross value of agricultural commodities produced in statistical divisions of the State.
- 8221.1 Manufacturing Industry, New South Wales**
Presents final results for New South Wales from the Manufacturing Census. Details of the number of establishments; employment; wages and salaries paid; and turnover are shown, classified by industry class. Also contains data on employment size and selected structural data for broad regions.
- 8635.1 Tourist Accommodation, New South Wales**
Number of establishments with facilities providing short-term accommodation; hotels, motels and guest houses, caravan parks, holiday flats and units and visitor hostels showing capacity, occupancy rates and takings from accommodation for each month by type of establishment. Includes data by statistical division and selected statistical local areas. For hotels and motels, includes data by star grading.
- 8731.1 Building Approvals, New South Wales (Monthly)**
Number of dwelling units and value of residential buildings approved for private sector and public sector; value of alterations and additions to residential buildings and value of non-residential building by class of building approved.
- 8741.1 Dwelling Unit Commencements Reported by Approving Authorities, New South Wales (Monthly)**
Contains details of the number of dwellings commenced as reported by approving authorities in local government areas; material of outer walls and ownership (private or public sector) in statistical divisions.
- 8752.1 Building Activity, New South Wales**
Number of dwelling units and value of residential buildings, value of alterations and additions to residential buildings and value of non-residential building by class of building; private sector/public sector ownership; stage of construction; value of work done during period, value of work yet to be done; number of new houses by class of builder.
