NEW ISSUE

Crime and Safety, New South Wales, April 1990 (4509.1)
\$10.00

This publication contains results from a survey of crime and safety which was conducted throughout NSW in April 1990. Information was collected from individuals and households about their experience of selected crimes, individuals' perception of crime problems in their neighbourhood, and households' membership of Neighbourhood or Rural Watch programs.

FINAL ISSUE

Births, New South Wales, 1989 (Final) (3306.1)
\$11.30

Final Issue. This data in future will be available in the new annual publication *Demography, NSW* (3311.1) expected to be available during 1991.

Embargoed until 11.30 a.m. 21 December 1990

FURTHER INFORMATION

Titles of the major publications issued by the Sydney Office of the ABS are shown on the back cover of this publication; those issued during the current issue month are listed in the inside front cover. A list of the complete range of publications available from the ABS can be obtained from any ABS office.

In some cases, the ABS can also make available information which is not published. This information may be made available in one or more of the following forms: microfiche, photocopy, data tape, computer printout, clerically-extracted tabulation. Generally, a charge is made for providing unpublished information. Inquiries should be made as shown in the inquiries section of this publication.

A range of statistics is also available via electronic dissemination services. AUSSTATS, an on-line database containing a wide range of statistics, is available Australia-wide on PAXUS COMNET. In addition, selected economic, social and demographic statistics are released on DISCOVERY *6568. Further information about these services can be obtained from the Sydney ABS Information Service on (02) 268 4611, or from any ABS Office.

SYMBOLS AND OTHER USAGES

Standard notations are used throughout this publication, with meanings as follows:

kWh	kilowatt hour
	Where figures have been rounded, discrepancies may occur between sums of the component items and the totals shown.
L	litre
MJ	megajoule
n.a.	Not available
n.e.c.	Not elsewhere classified
n.e.s.	Not elsewhere specified
n.p.	Not available for publication but included in totals where applicable
n.y.a.	Not yet available
p	Preliminary — figure or series subject to revision
r	Figure or series revised since previous issue
*	Subject to sampling variability too high for most practical purposes.
..	Not applicable
—	Nil or rounded to zero
—	Break in continuity of series (where a line is drawn across a column between two consecutive figures)

SEASONALLY ADJUSTED INDICATORS

In most instances, the aim in compiling monthly or quarterly economic time series is to provide evidence of movement, in order to indicate the effects changing conditions are having on the activities being measured — and, in so doing, to signal what might be likely to occur in the near future. Seasonal adjustment is a technique designed to assist in these processes of analysis and interpretation by removing the estimated effects of normal seasonal variation from statistical series, so that the effects of other influences on the series may be more clearly recognised.

Details of the methods used in deriving the seasonally adjusted figures shown in this publication are given in the publication *Seasonally Adjusted Indicators* (1308.0), last issued in 1983 by the Central Office of the ABS.

Seasonally adjusted statistics are revised following revision to the original data and as additional data are brought into the analysis each year.

For series where one of the components and the total of the components have been seasonally adjusted (e.g. private dwellings and total dwellings), any figures derived by deduction (in the example quoted — government dwellings) do not amount to a formally seasonally adjusted series for the balance of the components.

(a) Full-time employees are permanent, temporary and casual employees who normally work the agreed or award hours for a full-time employee in their occupation and received pay for any part of the reference period. If agreed or award hours do not apply, employees are regarded as full-time if they ordinarily work 38 hours or more per week. (b) Part-time employees are permanent, temporary and casual employees who are not full-time employees as previously defined.

NOTE. The tables on pages 6 and 7 contain estimates derived from the Survey of Employment and Earnings, an Australia-wide employer-based survey. Explanatory notes are contained in *Employed Wage and Salary Earners, Australia* (6248.0), which is issued quarterly and is available from the Sydney Office of the ABS. Estimates derived from the Survey of Employment and Earnings will differ from labour force estimates derived from the Monthly Population Survey for the reasons set out in the Information Paper *Comparison of Employment Estimates from the Labour Force Survey and the Survey of Employment and Earnings* (6263.0), which is available from the ABS.

(a) Overtime is time worked in excess of award, standard or agreed hours of work for which payment is received. Overtime hours represent the number of hours of overtime paid for. (b) The figures shown are based on the last pay period ending on or before the third Friday of the month shown. (c) Calculated by dividing total overtime hours paid for in each group by the total number of employees in the same group. (d) Calculated by dividing total overtime hours paid for by the number of employees who were paid for overtime. (e) The number of employees who were paid for overtime as a percentage of the total number of employees.

NOTE: These indexes are on a net sector basis. The All Manufacturing Industry Index relates to materials used by establishments classified to the Manufacturing Division of the Australian Standard Industrial Classification (ASIC), which have been purchased or transferred in from establishments outside that Division. The Subdivision/Group indexes relate to materials used by establishments classified to that Subdivision/Group of the Manufacturing Division which originated from outside that Subdivision/Group. Therefore, materials produced by other Subdivisions of Australian manufacturing industry, other Divisions of Australian industry (e.g. 'Agriculture, forestry, fishing and hunting' or 'Mining') and materials produced overseas are included. Further details of the indexes are contained in the publication *Price Indexes of Materials Used in Manufacturing Industries, Australia* (6411.0).

(a) From May 1990 these indexes are published using a new reference base (1988-89 = 100). (b) These indexes were previously combined, no figures available prior to June 1989.

NOTE: These indexes are on a net sector basis. Thus, the All Manufacturing Industry Index relates to articles produced for sale or transfer outside the Manufacturing Division of the Australian Standard Industrial Classification (ASIC), for export, or for use as capital equipment, whilst the Subdivision indexes also include articles produced for sale or transfer to other Subdivisions within the Manufacturing Division. Further details of the indexes are contained in the publication *Price Indexes of Articles Produced by Manufacturing Industry, Australia* (6412.0).

NOTE: The Import Price Index is a fixed weights index and is weighted using the pattern of Australian imports during the three years 1978-79, 1979-80 and 1980-81. Commodities whose prices are directly represented in the index constituted 84 per cent of the total value of imports of merchandise into Australia in 1980-81. Further details of the index are contained in the publication *Import Price Index* (6414.0). Index groups relate to commodities defined in terms of selected divisions of the *Australian Import Commodity Classification (AICC)* 1981-82 (1204.0).

(a) As the new AHECC sections are significantly different aggregations to the old AEC sections it is not possible to link the series. For further information refer to the publication *Export Price Index* (6405.0) September 1990 issue.

NOTE: The Export Price Index is a fixed weights index. The weights of the commodities directly represented in the index have been derived from values of exports in 1988-89, revalued to reflect 1989-90 prices except that for some commodities the weights assigned have been adjusted to reflect increases in exports since 1988-89 deemed to be of a long term nature. Further details of the index are contained in the publication *Export Price Index* (6405.0). Index groups relate to commodities defined in terms of selected divisions of the *Australian Harmonised Export Commodity Classification (AHECC)*.

(a) These are gross contents of metallic minerals produced, as determined by assay, and make no allowance for losses in smelting and refining. The quantities shown are therefore, in general, greater than those actually recoverable. (b) Includes the metallic contents (when finally separated) of zircon-rutile concentrates recovered in NSW and finally separated in Queensland. Excludes the metallic contents of zircon-rutile concentrates recovered in Queensland or imported into Australia and finally separated in NSW. (c) Content of fine metal.

(a) Intake by factories. (b) Source: Australian Dairy Corporation. (c) Includes direct butter-oil production. (d) Assorted milk-based confections containing 10 per cent or more butterfat; includes ice cream combined with other confections. (e) Includes assorted milk-based confections containing less than 10 per cent butterfat, and cust or more butterfat. (f) Canned and bottled. (g) Prior to July 1989 data for "bone-out" production was adjusted to present the data as a "bone-in" weight equivalent. The factor used for this adjustment has been reviewed and data revised for all previous periods. (h) Includes pickled vegetables.

(a) From July 1989 recurrent receipts for forestry (formerly included in mining, lands and forestry) were transacted through Special Deposit Accounts. (b) Prior to July 1989 Motor Vehicle tax receipts were reported in the 'Services rendered' category. (c) Commencing 1 July 1989, certain superannuation costs have been charged directly to individual departments and are included in the appropriate expenditure area(s) for those departments. Prior to 1989-90, these costs were charged on a service-wide basis and paid by Treasury.

(a) Excludes re-exported goods. State of origin is defined as the State in which the final stage of production or manufacture occurs. (b) On 1 January 1988, Australia adopted a new international classification system, the Harmonised Commodity Description and Coding System (HS). Due to the introduction of this classification, foreign trade data at the commodity level will be affected by a break in series. However, total import and export figures are not affected.
