EXPLANATORY NOTES

Introduction

After each population census the estimates of resident population (ERP), published since the previous population census, are revised. This publication contains the revised ERP for each statistical local area (SLA), statistical district, statistical subdivision and statistical division in Queensland, as at 30 June each year from 1986 to 1991.

Methodology for Estimating Resident Population

2. The ERP as at 30 June for 1986 and 1991 for each SLA was calculated by adjusting usual residence census counts for under-enumeration and adding the number of residents temporarily overseas at the census date.

3. As the 1991 census was held 6 August, a further adjustment was made to obtain the ERP as at 30 June 1991. This involved subtracting the increase in population of each SLA, due to natural increase and net migration between 1 July and 6 August, from the 6 August 1991 population estimate.

4. For intercensal years, the ERP for each SLA (at 30 June) was calculated using a linear regression model. The model established a mathematical relationship between changes in population and changes in other variables. This relationship was then used to estimate the change in population of each SLA. The main variables used included estimates of dwelling stock, (adjusted for changes in occupancy rates), births, deaths, electoral enrolments, family allowances and medicare registrations.

5. Other indicators of resident population movement have also been used to supplement the estimates from the regression model when preparing the published estimates. These include qualitative information from councils about mining and other development projects in their area.

Revisions made to ERP 1986 to 1991

6. In deriving the data for this publication, the 1986 and 1991 SLA estimates were revised to allow for differences in the treatment of persons who did not state their usual residence in the 1986 and 1991 Censuses. These revisions also allow for intercensal discrepancies and changes to statistical boundaries.

Revised treatment of usual residence not stated

6. In the 1991 census, the SLA of usual residence was not stated for over 60,000 persons in Queensland. For the purposes of the ERP, these persons were allocated proportionately to all SLAs in the State.

7. In the 1986 and previous censuses, they were allocated to the SLA in which they spent the census night. In order to preserve comparability, the estimates for 1986 were revised according to the method used in 1991.

Intercensal discrepancies

8. The intercensal estimates have been adjusted to ensure that the total increase (or decrease) for each SLA agrees with the difference between the adjusted ERP at 30 June 1986 and 1991.

Boundary changes

9. The boundaries of SLAs used in this publication are those which existed at 30 June 1991. The estimates for previous years have been adjusted where boundary changes occurred so that they reflect the population changes for each SLA on the same geographic area. The data in this publication are presented according to the Australian Standard Geographical Classification, Edition 2.1. Readers are encouraged to familiarize themselves with this publication for a full description of the boundary changes.

Definitions

10. *Legal local government areas (LGAs)*, as defined under the *Local Government Act 1936*, are spatial units which represent the geographical areas of incorporated local government councils, such as cities (C), towns (T) and shires (S).

11. *Statistical local areas* are the smallest spatial units for which the estimates of the resident population are presented. They correspond either to LGAs, or to suburbs in certain urban LGAs. Some LGAs are split into two parts, with each part forming a separate SLA. The unincorporated area of Queensland also forms a SLA. In aggregate, SLAs cover the whole of the State without gaps or overlaps.

12. *Statistical subdivisions (SSDs)* consist of one or more SLAs.

13. *Statistical divisions*, which are groupings of SLAs, are designed to be relatively homogeneous regions characterised by identifiable social and economic units within the region. The Brisbane Statistical Division comprises the Cities of Brisbane, Ipswich, Logan and Redcliffe, the Shires of Pine Rivers and Redland and parts of the Shires of Albert, Beaudesert, Caboolture and Moreton.

14. *Statistical districts* have been defined around selected urban areas to provide comparable statistics over a period of time. These districts, which are intended to contain the anticipated urban spread for at least 20 years, are generally defined as having a population of 25,000 or more and experiencing urban growth beyond the LGA boundaries.

Reliability

15. Although estimates of resident population are shown to the nearest unit, accuracy to this level is not claimed and should not be assumed.
