MAIN FEATURES

The excess of imports over exports (trade deficit) for the March quarter 1986 narrowed to \$90m from \$545m recorded in the previous quarter. The corresponding figure for the March quarter 1985 was \$444m.

The country and country group contributing most to the March quarter deficit in the recorded balance of trade, with their contribution for the previous quarter shown in brackets, were: the USA \$978m (\$1,004m); and the EEC \$942m (\$823m).

This was partly offset by an increased surplus in the recorded balance of trade with the Developing Countries and Centrally Planned Economies groups to \$1,273m and \$808m respectively in the March quarter 1986 from \$1,010m and \$452m in the December quarter 1985.

EXPLANATORY NOTES

Introduction

This publication contains quarterly statistics of Australia's trade with selected major trading partners and groups of countries that are of significance to Australia's international trading pattern. The statistics are classified by Sections (1 digit) and Divisions (2 digits) of the Australian Export Commodity Classification (AECC) (1203.0) and the Australian Import Commodity Classification (AICC) (1204.0). Statistics for 1984-85 and 1985-86 may be amended as a result of continuing quality checks on foreign trade data. Although these amendments generally have little effect on broad aggregate statistics, they may have a significant effect on individual commodity statistics. For this reason, statistics for 1984-85 and 1985-86 should be regarded as preliminary and subject to revision.

2. More detailed figures (i.e. at the 5 and 7 digit levels) are available on request.

Source of data

3. These statistics are compiled by the Australian Bureau of Statistics from documentation submitted by exporters and importers, or their agents, to the Australian Customs Service as required by the Customs Act.

Statistical concepts

4. The statistics of exports and imports presented in this publication are recorded on a general trade basis: i.e. total exports include both Australian produce and re-exports, and total imports comprise goods entered directly for home consumption and goods imported into Customs warehouses.

5. Australian produce is defined as goods, materials or articles which have been produced, manufactured or partly manufactured in Australia, except goods which were originally imported and have undergone only minor operations which leave them essentially unchanged.

6. Re-exports are defined as goods, materials or articles originally imported which are exported in the same condition in which they were imported, and goods, materials or articles originally imported which are exported after undergoing repair or minor operations which leave them essentially unchanged. Minor operations include blending, packaging, bottling, cleaning, sorting, husking and shelling.

7. Although items of non-merchandise trade are recorded, they are excluded from exports and imports. The value of non-merchandise exports is shown in Table 1 of publication 5404.0: Exports Australia, and the value of non-merchandise imports is shown in Table 1 of publication 5406.0: Imports Australia-both issued monthly (see paragraphs 17 - 20).

8. The following are excluded from foreign trade statistics:

- (a) direct transit trade, i.e. goods being trans-shipped or moved through Australia for purposes of transport only;
- (b) migrants' and passengers' effects exported or imported and parcels post exports and imports of small value, for which Customs entries are not required;
- (c) certain materials under inter-governmental agreements for defence and similar projects for which Customs entries are not required;
- (d) ships and aircraft engaged in the transport of passengers or goods between Australia and other countries;

- (e) the sale and/or purchase of any ship or aircraft intended for use on overseas routes;
- (f) fish and other sea products landed abroad or in Australia directly from the high seas by Australian ships;
- (g) export consignments where the value of the goods in each transaction is less than \$250;

For imports only;

- (h) entries lodged on informal clearance documents (ICD) for values not exceeding \$250. In addition, from 21 October 1985 onwards, ICD's for postal articles valued between \$250 and \$1,000 are excluded.
- (i) bunkers and stores supplied to ships and aircraft prior to arrival in Australia.

Statistical period

9. Exports are recorded statistically in the month when the entries are lodged with the Australian Customs Service. Regular exporters or their agents, may provide details of their export shipments on a periodic rather than an individual shipment basis by submitting weekly or monthly returns. These "periodic returns" must be submitted to the Australian Customs Service within seven days of the end of the period in question covering all shipments during that period. All other exporters are required to report each individual shipment prior to the ship's departure. Approximately 90 per cent of monthly export values are recorded on periodic returns. The statistical month for Customs outports (generally ports other than those at which the main Customs office in each State is located) closes on the 21st of each month, whereas for mainports the statistical month is the calendar month.

10. Because of these factors, export statistics for a particular month do not necessarily represent entries lodged or commodities actually exported during that month. Analysis of past data has shown that in aggregate approximately 30 per cent of export trade by value for a particular month reflects actual shipments during that month, 60 per cent by value was actually exported during the previous month with the remaining 10 per cent by value exported in earlier months. For individual commodities the percentage by value representing actual exports in a month may vary considerably.

11. Imports are recorded statistically in the calendar month in which the import entries are both finalised by the Australian Customs Service and passed to the ABS for further processing. Import entries may be lodged early using the Customs check-to-arrive system or the documents may be delayed because of various validation checks carried out by Customs prior to the entries being passed to the ABS.

12. Imports statistics for a particular month do not necessarily represent entries lodged or commodities actually imported during that month. Analysis of past data has shown that in aggregate approximately 70 per cent of import trade by value for a particular month was actually imported during that month, 25 per cent by value was actually imported during the previous month with the remaining 5 per cent by value imported in earlier months. For individual commodities the percentage by value representing actual imports in a month may vary considerably.

Valuation

13. Exports. Goods actually sold to overseas buyers prior to shipment are valued at the free-on-board (f.o.b.) Australian port of shipment equivalent of the actual price at which the goods were sold. Goods shipped on consignment are valued at the f.o.b. Australian port of shipment equivalent of the current price offering for similar goods of Australian origin in the principal markets of the country to which the goods are dispatched for sale.

14. Imports. The recorded value of imports is the customs value (formerly referred to as the value for duty). On 30 November 1981, Australia adopted the GATT Agreement on Customs Valuation. The Agreement reflects one of a number of trade related codes of conduct established during the round of Multi-lateral Trade Negotiations (MTN) concluded in 1979.

15. Under the Agreement the primary basis for establishing the customs value is the price actually paid or payable, provided a number of conditions are met. The most important condition is that the buyer and seller must be independent of each other. If the conditions are not met the practical rules are used to determine the customs value.

16. The recording of the value of imports is on a free-on-board (f.o.b.) basis (i.e. the charges and expenses involved in delivering the goods from the

place of exportation to Australia are excluded). The recorded value also continues to include the value of the outside package, other than international containers used for containerised cargo.

Exports/Imports and non-merchandise trade

17. From July 1985, non-merchandise trade is excluded from export and import statistics. This is in accord with UN recommendations and practices adopted by Australia's major trading partners. Statistics prior to July 1985 included in this publication have been adjusted to be comparable with data from July 1985 and, consequently, will not be directly comparable with previous publications.

18. Exports. Non-merchandise exports consist primarily of re-exports of goods which were originally imported on a temporary basis or for repair, alteration or renovation, and exports of goods on a temporary basis (including goods for repair, alteration or renovation overseas) and subsequent re-importation.

19. Imports. Non-merchandise imports consist primarily of re-imports of goods which were originally exported on a temporary basis or for repair, alteration or renovation, and imports of goods on a temporary basis (including goods for repair, alteration or renovation in Australia) and subsequent re-exportation.

20. The value of non-merchandise trade is shown in Table 1 of publications 5404.0: Exports Australia and 5406.0: Imports Australia - both issued monthly. Complete lists of commodities comprising non-merchandise trade are shown under Section 9(b) of the AECC and AICC.

Commodity classification

21. Exports and imports are classified according to the items of the AECC and AICC respectively, which, from 1 July 1978, have been based on the Standard International Trade Classification, Revision 2 (United Nations, Statistical Papers, Series M, No. 34, Revision 2, 1975). A detailed description of the commodity items included in this publication is contained in the relevant classification. Copies of, or extracts from, these classifications may be obtained from offices of the ABS in Canberra and in each capital city.

Country

22. For the purposes of foreign trade statistics, a country is defined as a geographical entity which trades, or has

the potential to trade, with Australia in accordance with Australian Customs provisions. External territories under Australian administration are treated separately whilst self-governing territories and dependent territories under the administration of other countries may be treated as individual countries in Australian foreign trade statistics.

23. For exports, country refers to the country to which the goods were consigned at the time of export. Where the country of consignment is not determined at the time of export, goods are recorded as exported "For Orders" and in those cases where it was found to be impossible to determine the destination, as "Destination Unknown".

24. For imports, country refers to the country of origin of the goods, which is defined as the country of production for Customs purposes.

25. The selected countries included in this publication are China - excluding Taiwan Province, Japan, New Zealand, United Kingdom and the United States of America.

Country group

26. The country groups shown in this publication are selected economic groups with which Australia trades, namely:

Association of South-East Asian Nations (ASEAN)
Centrally Planned Economies (CPE's)
Developing Countries (DC's)
European Economic Community (EEC)
European Free Trade Association (EFTA)
Organisation of the Petroleum Exporting Countries (OPEC)

A list of the countries included in each of the above groups is shown in Appendix A. Country groups may not be mutually exclusive e.g. Indonesia is included in OPEC, ASEAN and as a Developing Country.

27. Component countries of some of the groups included in this publication will change from time to time. Because of this, it has been necessary to adopt rules for including countries in a particular country group. For the historical data included in Table 1 of this publication, the countries included in each group are those that were members on the last day of the latest quarter. For example, should a country cease to be specified as a Developing Country during the first week of the latest quarter, then its trade with Australia will not be

included in the Developing Country group for either that quarter or for any previous period. Trade figures for the Developing Country group (see footnote (a), Appendix A) represent the total trade with those countries although some commodities imported from those countries into Australia will not have been given Developing Country status. For example, certain types of mittens from Hong Kong are not granted Developing Country status and, therefore, do not attract a preferential rate of duty on importation. However, imports of mittens from Hong Kong, together with all other imports from that country are included in the Developing Country group statistics in this publication.

Excess of exports over imports

28. The statistics shown refer to the value of exports and imports recorded during the period specified (excluding non-merchandise trade). The excess of the value of exports over imports in Table 1 represents the balance of trade on a recorded trade basis. This is not the same as the balance of trade on a balance of payments basis. Statistics on a balance of payments basis are a more comprehensive measure of Australia's international transactions, and therefore, more appropriate for use in economic analysis. Details of the adjustments made to recorded trade data to derive estimates of foreign trade on a balance of payments basis are set out in the annual ABS publication Balance of Payments, Australia (5303.0).

Total exports and imports

29. It should be noted that the export and import figures designated total are the total trade for Australia and not the sum of the trade with the particular countries and country groups specified in the publication.

Treatment of confidential data

30. To ensure that information about the activities of particular businesses is not disclosed it is necessary to restrict the release of statistics of certain commodities. These restrictions do not affect total export and import figures but they can affect statistics at all levels of the ABCC and AICC. Refer to Appendix B for details.

Revision of statistics

31. Statistics shown in this publication were the latest available at the time of compilation. However, revisions may have since been made to the statistics, which could result in differences between figures in this publication and those in other related publications e.g. Exports by Commodity Divisions, Australia (5402.0), and Imports by Commodity Divisions, Australia (5405.0).

OTHER INFORMATION AVAILABLE

32. Special returns service: Subscribers to this service can receive computer produced printout of foreign trade statistics at a particular commodity level in one or more of a limited number of formats, for a charge consistent with the level of detail required. This service is recommended where up to fifty specific commodity items are required on a regular basis.

33. Microfiche service: Foreign trade statistics are also available on microfiche in a variety of tabular formats. Each tabular format covers all commodities exported or imported at various levels of aggregation. This service is recommended where the subscriber wishes to obtain foreign trade details for a large number of commodities.

34. Magnetic tape service: Statistics for imports, exports and import clearances are available on 9-track magnetic tape approximately 4 weeks after the end of the reference period. This service is recommended where the subscriber wishes to obtain trade data at the most detailed level. Documentation regarding the content and structure of these tapes is available from the ABS Trade and Shipping Section in Canberra.

35. To meet subscribers' needs special returns, microfiche and data on magnetic tape are available on a monthly, quarterly or less frequent basis. Relevant application forms and information papers for these services are available from the ABS Trade and Shipping Section in Canberra or any ABS State office. Payment in advance is required for each of these services.

(e) Processing backlogs in the Australian Customs Service affected import and import clearance statistics for the months of September 1984 to February 1985 and again in November 1985. As a result, the value of imports for the eight months ended February 1985 is understated by an estimated \$600m (cleared in March 1985) and November 1985 by an estimated \$200m (cleared in January 1986). Consequently, the December and March quarters for 1984-85 and 1985-86 are affected by these discrepancies.

Appendix B : Confidential Commodity Listing - Exports

Restrictions are placed on the release of statistics for certain commodities for reasons of confidentiality. Commodities covered by the item codes listed below are subject to a 'No Commodity Details', 'No Country Details' or 'Selected Country Details' restriction.

In Table 2, commodity data subject to 'No Commodity Details' and 'No Country Details' restrictions are COMPLETELY EXCLUDED from the relevant Sections and Divisions and INCLUDED in Division 9A. Commodity data subject to the 'Selected Country Details' restriction are treated the same way but only for the countries to which the restriction applies.

In Table 3 commodity data subject to 'No Commodity Details' restrictions are COMPLETELY EXCLUDED from the relevant Sections and Divisions and INCLUDED in 9A. Items subject to a 'No Commodity Details' restriction are identified with an asterisk.
