EXPLANATORY NOTES

Introduction

This publication contains quarterly overseas shipping and cargo statistics. The statistics are compiled by the ABS from statistical returns (B380/381) provided by shipping companies or their representatives to the Australian Customs Service at each port in Australia. The production of this publication has been delayed by the introduction of a new processing system. The resultant backlog of publications will be eliminated as soon as possible.

2. In addition to this publication, the ABS prepares microfiche tabulations which present more detailed statistics and magnetic tape which enables purchasers to undertake specialised analyses. For more information on unpublished statistics see paragraph 19 below.

Scope of the statistics

3. The statistics in this publication relate to ships calling at or departing from Australian ports for the purpose of carrying cargo from or to overseas ports. Details are not therefore included for the following:

- (a) naval ships;
- (b) yachts and other craft used for pleasure;
- (c) foreign fishing ships visiting Australian ports for purposes other than the loading or discharge of cargo;
- (d) geophysical, oceanographic research and seismic survey ships;
- (e) offshore oil drilling rigs and related service ships;
- (f) Australian registered fishing ships operating from Australian ports; and
- (g) all ships of 200 registered net tonnes and under.

Coverage

4. Shippers or their agents are required to submit details of each arrival or departure at an Australian port of a ship involved in the carriage of cargo between Australia and overseas, whether or not overseas cargo is discharged or loaded.

Units of quantity

5. Cargo statistics are recorded in both 'revenue tonnes' and in 'gross weight' tonnes.

- (a) A revenue tonne is the unit of quantity predominantly used in the shipping industry. It is the basis on which freight is charged and may be measured by mass (tonnes) or volume (cubic metres). Revenue tonnes statistics are consequently a mix of mass and volume units and should be used with care.
- (b) Gross weight is the total weight in tonnes of cargo, excluding the weight of containers, irrespective of the basis on which freight is charged.

6. This publication also contains statistics on deadweight tonnage, which is the total weight in tonnes of cargo, stores, fuel, passengers and crew carried by the ship when loaded to its maximum summer loadline.

Ship characteristics

7. Ship Recording. Ship statistics in this publication are recorded as 'Ship Number' in Tables 3, 13 and 14, and 'Ship Calls' in Table 9. 'Ship Number' is the number of direct arrivals from overseas or departures from Australia. 'Ship Calls' is the number of port visits made to Australian ports by ships engaged in overseas voyages. For example, a ship which arrives direct from overseas in Brisbane, and makes a further call in Sydney before

departing for an overseas port from Melbourne, is counted once under 'Ship Number' for both arrivals (Brisbane) and departures (Melbourne), and as 1 arrival call and 1 departure call for each of the three ports.

8. In Tables 3, 13, and 14 statistics of cargo loaded and discharged appear side by side with statistics of ship arrivals and departures. These statistics should not be linked as the cargo details do not necessarily relate to the ships in the tables. Cargo may, for example, have been loaded onto a ship which was still in an Australian port, i.e. had not departed for overseas, at the end of the period. Alternatively a ship may depart in one period with cargo loaded in an earlier period.

9. Ship Type. All ships are classified from Lloyd's Register of Shipping according to one of 11 ship types in terms of their structure or design. For the purposes of the tables in this publication, these 11 ship types are amalgamated into four broad categories as follows:

CATEGORY	SHIP TYPES
(a) General cargo ships	Container ships Conventional cargo ships Roll on-roll off ships Other cargo ships
(b) Tankers	Gas carriers Liquid tankers
(c) Bulk carriers	Dry bulk carriers Dry/wet bulk carriers
(d) Other ships	Multi-purpose ships Passenger ships Other ships

10. It should be noted that this classification was implemented with the September quarter 1983 publication,

Although differences between the new and old classifications are minor, care should be taken when comparing statistics for earlier periods with those released in the September 1983 and subsequent quarterly publication.

11. Type of Service. Ships are also classified according to the type of service they provide. Types of service for which statistics are shown in this publication are:

- (a) Liner service, which relates specifically to a ship which is operated by a carrier providing services on a specified route on a relatively regular basis; and
- (b) Other service, which refers to all ships operating in other than a liner service.

12. Liner Service is further classified by Conference and Non-Conference. A 'Conference' is an association of ship owners which regulates the freight rates and terms and conditions of carriage of goods in any particular trade. Conference agreements exist only in respect of liner services and normally include provisions for sharing the trade, rationalising sailing schedules, and pooling arrangements for resources and/or revenue.

13. From July 1981 type of service and conference status have been allocated to ships by the ABS from information supplied by the Department of Transport. Statistics for earlier periods were presented using type of service and conference information reported by informants and are not necessarily comparable.

14. Country of Registration or flag of the ship, refers to the country in which the ship is registered according to Lloyd's Register of Shipping.

15. Container Cargo. Statistics of container cargo shown in this publication refer to cargo shipped in

both standard international containers (20 ft. (6.1m) and 40 ft. (12.2m)) and non-standard international containers. To provide a standard measure, all container statistics are expressed in terms of 20 ft. (6.1m) units. Therefore, a 40 ft. (12.2m) container is recorded as two twenty-foot equivalent units (or TEU's).

16. Ships with Cargo or in Ballast. Ships with cargo are those ships which arrived at or departed from an Australian port carrying overseas cargo. This includes ships which carried overseas cargo that was not loaded or unloaded at the port. Ships in ballast are those ships which arrived at or departed from an Australian port without cargo.

Trade area

17. Ports at which ships load or discharge cargo are allocated to their respective countries, which are in turn allocated to trade areas in accordance with the Classification of Trade Areas for Cargo Statistics (see Appendix 1 at the end of this publication). For example, Santiago is allocated to Chile which is included in the trade area 'South America-West Coast Area' for the purpose of this publication.

Revisions to previous figures

18. Although the documents from which the statistics in this publication are compiled are normally submitted to the Australian Customs Services at the same time as ships arrive or depart, some delays do occur in the lodgement of the documents or in their transmission to the ABS. In order to release relatively timely statistics, therefore, data is published with a small number of survey forms still outstanding. Consequently the statistics for a particular quarter when first released will suffer from some undercoverage and will be

updated in ensuing publications by information contained in late returns. In addition, revisions to individual items of data may cause some changes in aggregates for particular periods. It should be noted that some figures for 1980-81 and 1981-82 shown in this issue differ slightly from those published previously because of revisions made during the transfer of data to the new processing system.

Unpublished shipping statistics

19. Not all shipping statistics compiled by ABS and available to users appear in this publication. For information about these additional statistics please ring Mr Michael Toole on Canberra (062) 52 5406 or Information Services in ABS State offices.

20. Other ABS publications which may be of interest include:

Shipping and Air Cargo Commodity Statistics, Australia: An Information Paper (9250.0)

Shipping and Air Cargo Commodity Statistics, Australia (9206.0).

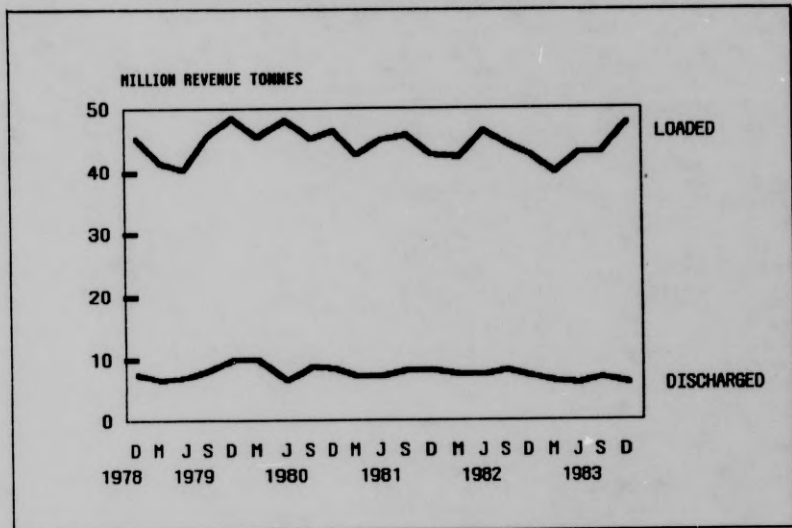

21. Current publications produced by the ABS are listed in the Catalogue of Publications, Australia (1101.0). The ABS also issues, on Tuesdays and Fridays, a Publications Advice (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.
