NOTE: Import statistics relate to the month in which import entries are finalised by Customs and passed to the ABS for processing. They do not necessarily represent entries lodged or commodities actually imported during the month. See paragraphs 6 and 7 of the Explanatory Notes.

EXPLANATORY NOTES

A brief outline of the major definitions used in compiling the statistics in this publication is contained in the following explanatory notes and in table footnotes. For a more detailed description refer to the information paper Foreign Trade Statistics: An Overview (5481.0).

2. This publication contains statistics of Australia's imports classified according to Australian Import Commodity Classification (AICC) (1204.0). From 1 July 1978, the AICC has been based on the United Nations Standard International Trade Classification (SITC) Revision 2.

3. The statistics of imports presented in this publication are, with one exception, recorded on a general trade basis, i.e. imports comprise goods entered directly for home consumption together with goods imported into bonded warehouses. Table 1 of this publication also shows statistics of imports on a special trade basis, i.e. imports cleared for home consumption. Imports cleared for home consumption differ in scope from imports in that they include withdrawals from bonded warehouses but exclude imports into bonded warehouses.

4. The recorded value of imports is the customs value (formerly referred to as the value for duty).

5. In accordance with United Nations recommendations, total imports excludes transactions of non-merchandise trade. Refer to Section 9(b) of the AICC for a complete list of commodities comprising non-merchandise trade. The monthly value of non-merchandise trade is shown in Table 1.

6. Imports are recorded statistically in the calendar month in which the import entries are both finalised by the Australian Customs Service and passed to the ABS for further processing. Import entries may be lodged early using the Customs check-to-arrive system or the document may be delayed because of various validation checks carried out by Customs prior to the entries being passed to the ABS.

7. Because of the way in which imports data are collected and processed approximately 70% of total import trade by value shown for a particular month reflects actual shipments in that month, while approximately 25% reflects actual shipments during the previous month with the remaining 5% by value being imported in earlier months. For individual commodities these percentages may vary considerably.

8. Restrictions are placed on the release of statistics for certain commodities for reasons of confidentiality. These restrictions do not affect total import figures, but they can affect statistics at all levels of the AICC. Refer to table footnotes and the Appendix for specific details. The information paper Confidentiality and the Release of Foreign Trade and Shipping Statistics (5486.0) describes fully the confidentiality process.

9. Revisions to previously published data frequently occur due to continuing data quality checks and statistics in this publication should be considered preliminary.

10. Import statistics are also available on microfiche, special returns, and magnetic tape. A comprehensive series of information papers describe these services. For more information, please contact any ABS office.

(a) See paragraph 3 of the Explanatory Notes.

(b) Significant variations in the rate of processing of import records in the Australian Customs Service affected import and import clearance statistics for certain months. Figures for these months are overstated (+) or understated (-) as follows :

September 1986	+\$100m	December 1986	+\$100m
October 1986	-\$250m	January 1987	+\$100m
November 1986	-\$250m	February 1987	+\$200m

As a result, statistics for the September, December and March quarters of 1986-87 are not directly comparable.
