|--|--|----|

EXPLANATORY NOTES

In this bulletin shipping container cargo statistics tables follow those for total shipping cargo, which include container cargo. The statistics relate to overseas cargo discharged and loaded at Australian ports.

2. Total shipping cargo statistics are classified by type of shipping service (liner, tramp/bulkship/tanker). Except for Table 8, container cargo statistics are not classified in this way because insufficient cargo is carried by vessels other than liners (herein referred to as 'other services') to justify publishing these statistics separately. Both series, however, are classified by countries, geographic trade areas and Australian States.

3. Statistics of shipping container cargo carried by other services may be obtained on request from the Australian Bureau of Statistics, Canberra.

4. Statistics shown for 1973-74 are preliminary and subject to revision.

5. Any discrepancies between totals and sums of components in tables are due to rounding.

Scope of the statistics

6. Overseas shipping cargo statistics are compiled from returns submitted by shipping companies or their representatives to Customs Houses at each port throughout Australia. A return is required for each movement of a vessel into and out of a port except (i) naval vessels, (ii) yachts and other craft used for pleasure, (iii) foreign fishing vessels that neither load nor discharge cargo, (iv) geophysical and oceanographic research vessels, and oil drilling rigs and vessels servicing them, and (v) other vessels of 200 net tons and under. Arrivals and departures are treated separately in the statistics. The Shipping Register maintained under Customs Act by the Department of Customs and Excise in each port is examined to ensure that a return is received for each entrance or clearance of an overseas vessel.

Units of quantity

7. Cargo is recorded on returns either in terms of units of weight or of measurement depending on the basis on which freight is charged. The statistics for cargo recorded in tonnes are shown separately from cargo recorded in cubic metres. The aggregates for weight and measure cargo are not added to a figure for total cargo because they are unlike quantities and comparisons of total cargo between ports, trade routes or periods of time could be affected by variations in the cargo mix and in the basis on which freight is charged.

Classification of vessels

8. In the statistics for total cargo, vessels are classified in two groups: liner services; and tramps, bulkships and tankers. Liner services include both passenger and cargo liners.

Liner services

9. A liner service specifically relates to a vessel which, on the voyage on which cargo is loaded or discharged at an Australian port, is operated by a carrier in providing services on a specified route on a relatively regular basis. In the majority of cases a liner can be clearly distinguished from other vessel types but in some cases it is more difficult to make this distinction, for example, when a vessel operates as a liner at one point of time and as a tramp at another point of time. Classification difficulties also arise in the case of vessels which divert from services between other countries to discharge cargo at Australian ports.

10. Statistics of cargo shipped on liner services do not necessarily provide a measure of cargo carried by ships operating under shipping conference arrangements. For example, liner services may be provided by shipping companies which are not parties to conference agreements. Cargo may also be shipped under shipping conference conditions in vessels operating on a voyage charter basis for specific cargo; in these statistics such cargo is classified as cargo shipped on tramp services.

Container cargo

11. Container cargo shown in the bulletin refers to containerised cargo in general and not uniquely to cargo transported in international standard containers carried by cellular container vessels.

12. The term 'container' refers to an article of transport equipment (lift-van, movable tank or other similar structure):

- (i) of a permanent character and accordingly strong enough to be suitable for repeated use;
- (ii) specifically designated to facilitate the carriage of goods by one or more modes of transport, without intermediate reloading;
- (iii) fitted with devices permitting its ready handling, particularly its transfer from one mode of transport to another;
- (iv) so designed as to be easy to fill and empty; and
- (v) having an internal volume of one cubic metre or more.

Country of loading or discharge

13. Ports at which reporting vessels load or discharge cargo are allocated to their respective countries and these are the countries of loading and discharge of cargo shown in the statistics. Countries are classified to geographic trade areas in accordance with the Classification of Geographic Trade Areas for Shipping Statistics set out in Appendix 1. The major trade areas used in *Total Cargo* Tables 2 to 5 and also *Container Cargo* Tables 9 to 11 consist of a summary grouping of geographic trade areas.

14. The countries shown are not necessarily the countries of origin or ultimate destination of cargo because previous or subsequent overseas transshipments are not taken into account. The statistics of cargo classified according to the country in which it was loaded or discharged cannot therefore be compared directly with statistics of overseas trade classified by country of origin or consignment. In Australian import statistics, country of origin refers to the country in which the goods imported were produced. In Australian export statistics, country of consignment refers to the country of final destination of goods at the time of export and not to any country in which they may be transhipped en route. For example, where the United Kingdom is the country of final destination but the goods exported are transhipped at a Netherlands port, export statistics would show them as exports to the United Kingdom, whereas in shipping cargo statistics they would be shown as cargo loaded for discharge in the Netherlands.

15. Cargo loaded for 'optional ports' (i.e. consignments of cargo for discharge at one of a specified range of ports, the particular port being nominated by the shipper during the voyage) is classified to the country in which the ports are situated when they are all within one country. If the range of port options extends beyond one country, the cargo is allocated to the category 'optional ports' within the relevant geographic trade area.

State of loading or discharge

16. The State of loading or discharge shown in these statistics is the State in which cargo is loaded on, or discharged from, a vessel on an overseas voyage. Overseas cargo loaded in a given State can, therefore, include cargo previously shipped interstate. Similarly, overseas cargo discharged can include cargo to be shipped interstate.

17. Overseas cargo carried in cellular container vessels of the European liner service is loaded or discharged at Fremantle, Melbourne, Sydney and Brisbane. Cargo for States not served directly through their own ports is thus diverted, for example, most container cargo moving between South Australia and Europe goes through Melbourne.

Outward overseas cargo statistics

18. Statistics of outward sea and air cargo loaded for discharge overseas in 1971-72 and later periods, measured by gross weight and value and classified by commodity, type of shipping service, type of cargo and ports of loading and discharge are published each quarter in the bulletin *Outward Overseas Cargo: Sea and Air* (Reference No. 14.16). As these statistics are derived from different source documents, namely the entries for exportation lodged with the Department of Customs and Excise, they are not directly comparable with the statistics in this bulletin.

NOTE. In this issue statistics of cargo are shown in metric units for the first time (1 ton weight = 1.01605 tonnes; 1 ton measurement = 1.132672 cubic metres).
