

The Leak Test

There is no cure for AIDS, and the best ways to protect yourself are not to have sex or be faithful to one partner who is also faithful to you.

But if you do decide to take the risk, you must use a condom *every time you have sex*.

Because, when used correctly, the most effective way to prevent the transmission of the AIDS virus is with a condom.

The AIDS virus is transmitted through body fluids, and condoms are scientifically tested so they won't leak. Just as fluids can't get out, the AIDS virus can't get in.

So, remember...

*If you're thinking about sex,
think about condoms.*
