INQUIRIES Inquiries concerning these statistics may be made by telephoning Information Services on Melbourne (03) 615 7000; for advice on the interpretation of these statistics ask for Lloyd Edwards. Mail inquiries should be addressed to ABS Information Services, GPO Box 2796Y, Melbourne 3001.

MAIN FEATURES

POPULATION AT 30 JUNE 1988

- The estimated resident population (ERP) in Victoria was 4,261,945.
- The population (ERP) for the Melbourne Statistical Division (MSD) reached three million (3,002,329).
- The City of Keilor became the fifth Statistical Local Area in the MSD to have a population (ERP) of more than one hundred thousand (101,281).
- Children (aged less than 15 years) represented 21.7 per cent of Victoria's population. Within the MSD, the highest concentrations were found in the Shires of Melton (32.5 per cent) and Bulla (30.0 per cent). The City of Prahran had the lowest proportion (9.5 per cent). Outside the MSD, both the East Central Statistical Division and the Goulburn Statistical Division had the highest proportion of children (24.9 per cent) and the Barwon Statistical Division had the lowest proportion (21.8 per cent).
- The aged (65 years or more) represented 11.0 per cent of Victoria's population. Within the MSD, the highest concentrations were found in the Shire of Flinders (24.7 per cent), the City of Brighton (19.6 per cent) and the City of Caulfield (19.2 per cent). The Shire of Melton had the lowest proportion (3.1 per cent). Outside the MSD, the Wimmera Statistical Division had the highest proportion of aged persons (14.2 per cent) and the Central Gippsland Statistical Division had the lowest proportion (9.8 per cent).

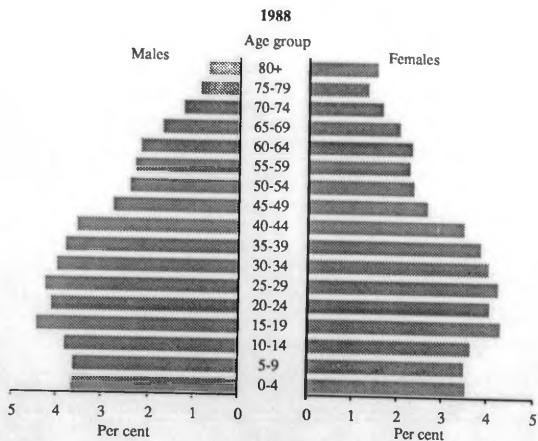

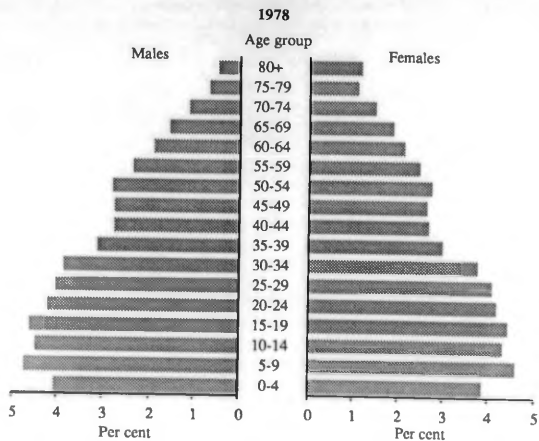

CHANGES FROM ONE YEAR AGO

- The population (ERP) in Victoria increased by 52,999 (1.3 per cent) and in the MSD by 36,680 (1.2 per cent).
- The age group with the greatest increase was for persons aged 40 to 44 which increased by 16,800 (6.0 per cent), followed by the 65 to 69 age group with an increase of 7,188 (4.7 per cent).
- The number of children in Victoria decreased by 2,223 (0.2 per cent).
- The number of aged persons in Victoria increased by 12,077 (2.6 per cent).

CHANGES FROM TEN YEARS AGO

- The population (ERP) for Victoria increased by 398,145 (10.3 per cent) over ten years.
- The population (ERP) for the MSD increased by 245,129 (8.9 per cent) over this period.
- The number of children in Victoria, decreased by 79,044 (7.9 per cent).
- The number of aged persons in Victoria, increased by 104,247 (28.5 per cent).

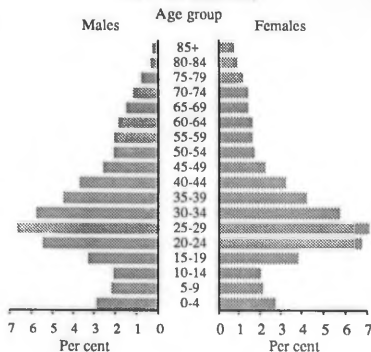

PERCENTAGE OF POPULATION IN AGE GROUPS BY SEX,
VICTORIA, 30 JUNE 1978 AND 30 JUNE 1988

The age/sex distribution of the population varies between Statistical Local Areas. In order to illustrate the differences in various regions in Victoria, the distribution of four SLAs within the MSD are outlined below.

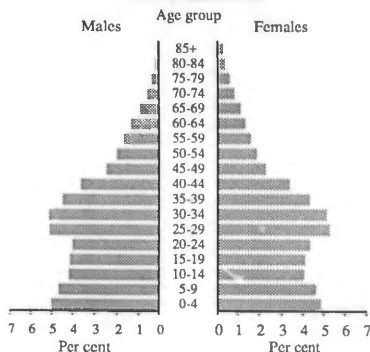

**PERCENTAGE OF POPULATION IN AGE GROUPS BY SEX, FOR
SELECTED STATISTICAL LOCAL AREAS, 30 JUNE 1988**

CITY OF FITZROY

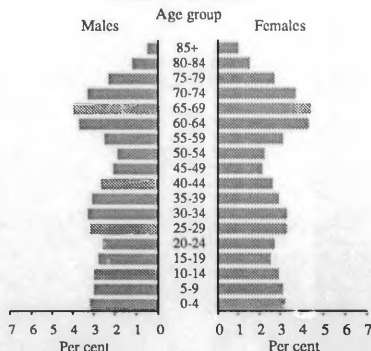

The City of Fitzroy is an inner Melbourne suburb. Its population has declined from 19,100 in 1981 to 18,427 in 1988. The distribution is characterised by a high proportion of persons in the 15-44 age groups.

CITY OF BERWICK

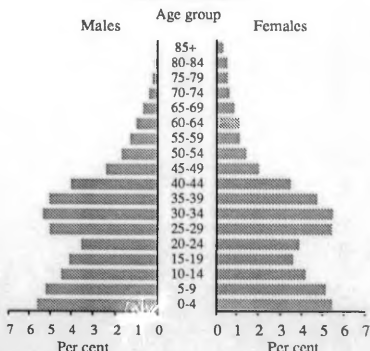

The City of Berwick has increased from 37,300 in 1981 to 58,550 in 1988. The distribution is characterised by high proportions in the 0-9 age groups and the 25-44 age groups.

SHIRE OF FLINDERS

The Shire of Flinders is part of the Mornington Peninsula. Its population has increased from 27,000 in 1981 to 37,461 in 1988. The distribution is characterised by a high proportion of persons in the 60-74 age groups.

SHIRE OF BULLA

The Shire of Bulla has increased from 18,800 in 1981 to 32,948 in 1988. The distribution is characterised by high proportions in the 0-9 age groups and the 25-44 age groups.

EXPLANATORY NOTES

Introduction

This publication contains estimated resident population by age and sex of Statistical Local Areas (SLAs) and broader Statistical Areas of Victoria at 30 June 1988. This is the first time such estimates by age and sex have been published in this form. Estimates for 30 June 1986 and 1987 were released on floppy disk.

2. The estimated resident population is compiled according to the place of usual residence of the population. An explanation of the conceptual basis is given in the ABS Information Paper entitled *Population Estimates: An Outline of the New Conceptual Basis of ABS Population Estimates* (3216.0).

Methodology

3. The methodology used to determine the estimated resident population for total persons (all ages) for each Statistical Local Area (SLA) is consistent with methods used in the calculation of equivalent estimates for previous years.

4. Estimates of the age and sex of SLA populations in this publication were obtained by the demographic cohort component method. Estimates for 1988 were updated from 1987 using SLA population estimates by age and sex at 30 June 1987, recorded births and deaths during the year 1987-88 and the total population estimate at 30 June 1988. The total population growth for an SLA during 1987-88 was split into natural increase and net migration components, the latter being the difference between total growth and natural increase during 1987-88. Age-sex estimates of natural increase were obtained from vital registrations (i.e. births and deaths), and those for net migration were derived as follows:

(i) The net migration component was subdivided into internal arrivals and departures and overseas arrivals and departures, and proportionate age-sex distributions were allocated to each of these subdivisions for each SLA.

(ii) A small number of migration profiles (the proportionate age-sex distributions) for inter-SLA arrival, inter-SLA departure and overseas arrival to each SLA were obtained from the 1986 Census data on usual residence one year prior to the census date.

(iii) Age-sex migration profiles for overseas departures for an SLA were based on an average of overseas departures for the last 3 years derived from passenger cards for the State/Territory which incorporated the SLA.

Reliability

5. Estimates for each age and sex category are shown to the nearest unit without rounding; **accuracy to this level is not claimed and should not be assumed.** Estimates are usually published to the nearest hundred persons in the Melbourne Statistical Division, and the nearest ten persons in the rest of Victoria. Rounding was not done because rounding of small cells could result in substantial year to year fluctuations owing to the rounding process rather than the actual population change.

Australian Standard Geographical Classification

6. The geographic areas used in this publication are defined in the *Australian Standard Geographical Classification (ASGC), Edition 5* (1216.0).

Changes to Statistical Boundaries

7. All population data contained in this publication are on a 30 June 1988 boundary basis.

Data on Floppy Disk

8. Estimated resident population classified by age and sex for 30 June 1986, 1987 and 1988 is available on floppy disk. Order forms can be obtained from the Victorian Office by contacting the ABS Bookshop on (03) 615 7000.
