ESTIMATED AGE DISTRIBUTION OF THE POPULATION: STATES AND TERRITORIES  
OF AUSTRALIA, 30 JUNE 1968

This issue contains an estimated age distribution of the population at 30 June 1968 by single years of age, showing males, females and persons separately, for the States and Territories of Australia.

2. The estimated age distribution is based on the age distribution of persons enumerated at the Census of 30 June 1966 adjusted for mis-statement of age, and on subsequent records of births, deaths, arrivals and departures. The recorded ages of the latter three categories are taken into account.
3. The census figures of age, on which these estimates are based as bench-marks, show evidence of inaccuracy in age statements, such as apparent "preferences" for certain ages. Adjustments for these inaccuracies were made, but in view of these inaccuracies and the necessarily arbitrary nature of the adjustments, accuracy down to units in the figures for each age cannot be claimed; nor is the updating procedure by which estimates are brought forward from the bench-marks accurate down to units. In the Australian totals, to suggest accuracy to the nearest hundred at each age appears reasonable, and therefore the figures are shown in hundreds only. The hundreds unit is too large to use for States and Territories and the practice has therefore been adopted of showing State populations at each age down to the nearest ten. For total populations, i.e. populations of all ages, the Australian figures show hundreds only, and the State and Territory figures are shown to the nearest fifty.
4. Rounding constituent figures and adding them will occasionally result in a total differing from the rounded total, thus producing an apparent discrepancy. A note on the method of rounding used, and on the possible discrepancies resulting follows.

Australia

The "all ages" totals for males, for females and for persons were rounded to the nearest hundred, without adjusting to make the total of males and females equal to total persons. The numbers at each single age for males and females separately were rounded to the nearest hundred, and adjusted to make the rounded numbers for individual ages add to the rounded totals of each five-year age group and to the rounded totals for "all ages". The figures for persons for each single age and for the five-year age groups were obtained by adding the rounded figures for males and females. As explained above, the "all ages" total was separately rounded, and thus a discrepancy between the "all ages" totals for persons and the sum of persons for all single ages is possible.

States and Territories

For each State and Territory the "all ages" totals for males, for females and for persons were rounded to the nearest fifty without adjustment. The numbers at each single age for males and females separately were rounded to the nearest ten, and then adjusted to make the rounded numbers for individual ages add to the rounded total of each five-year age group and to the rounded totals for "all ages". The figures for persons for each single age and for the five-year age groups were obtained by adding the rounded figures for males and females. As explained above, the "all ages" totals were separately rounded, and thus a discrepancy between the "all ages" totals of males-plus-females and persons is possible. A discrepancy due to rounding appears at most ages between the sum of the eight States and Territories, each rounded to a ten, and the Australian totals, rounded to a hundred.
